

CS4540

Respository Link :

- <https://github.com/kenmingwang/CS4540>

UI/UX choices:

- Professor page:
 - Used a simple table to show the LOs, Metrics and the examples. All in one line so easy to read.
 - The files that is required to upload but haven't will be greyed out and will warn the professor some how that something is missing.
 - One badge besides the class name to warn the professor that you haven't finish the LO for such class yet.
 - Instead of making buttons for every uploadable posistions, I choose to have a "Edit" button besides the columns and user can do update/remove from there.
 - Instead of having a "next page" to show different classe LOs, I made it in one page so user can just scroll down. After we are allowed to use libraries, I will change it to a collapsable table so it's more straightforward.
- Department Chair page:
- Used Progress bar to show the LO status of a specific class.
